

# Is PrEP for me?

PrEP is a **prevention method for seronegative** people which consists of taking a medication before sex to avoid an HIV infection.

This medication is **effective in preventing HIV**, but it **does not protect** against other STIs.

PrEP is available in multiple Montreal clinics specialized in STIs. If you feel that PrEP may be for you, discuss it with a counsellor at RÉZO or a health care professional.

Visit RÉZO's website to find out more about PrEP  
(cost, access, effectiveness, secondary effects, how it works, etc.)
